EDUCATION

Syracuse University

Bachelor of Science, Computer Science

Anticipated Graduation: May 2025

Engineering and Computer Science Dean's List

- **Related Coursework:** Data Structures, Analysis of Algorithms, Software Specification and Design, Software Implementation, Operating Systems, Advanced Front End Web Design, Artificial Intelligence, DBMS

EXPERIENCE

Syracuse University

Teaching Assistant – Systems and Network Programming

Jan. 2025 – Present

Syracuse, NY

- Assisting students in understanding key course concepts, including Unix shell scripting, C programming, system calls, dynamic memory allocation, and network programming
- Reviewing and grading homework and exams, providing constructive feedback to improve student performance
- Collaborating with the professor to develop supplemental materials and ensure the delivery of course objectives

Chai Chai-Yeah (Chai Product Website)

Freelance Web Developer

Jan. 2025 – Present

Remote

- Designing and developing a modern, South Asian-inspired e-commerce website using Next.js
- Building reusable and accessible user interface components with React, TypeScript, and shadcn/ui, leveraging Tailwind CSS for rapid and consistent styling
- Integrating Stripe for secure payment processing, enabling seamless online transactions for chai products

HYEL, Inc.

Software Developer Intern

Oct. 2024 – Dec. 2024

Remote

- Co-developed *Fruit Frenzy*, a mobile game, in a team of three, using Swift, guided by seasoned developers
- Collaborated on including idea pitching, prototyping, development, and user experience testing

PROJECTS

Portfolio Site: <https://omar-camara.github.io/portfolio/>

Volunteer Matching Platform - Python (Flask), SQLite, Pytest, ReactJS

Sep. 2024 – Nov. 2024

- Built a platform connecting volunteers with organizations, featuring a Flask backend and ReactJS frontend
- Developed and tested RESTful API endpoints and optimized SQLite database queries
- Ensured functionality and reliability with unit and integration tests using Pytest

AI Tic-Tac-Toe Game - Python (NumPy)

Sep. 2024 – Oct. 2024

- Created an AI-powered game using Minimax and Alpha-Beta Pruning, reducing decision-making time by 90%
- Leveraged NumPy for game-state management and algorithm performance tests via AI vs. AI simulations

RESEARCH

Research Assistant – Detection Models for Misinformation and Disinformation

Syracuse University

Feb. 2025 – Present

Syracuse, NY

- Researching, developing, training, and evaluating detection models for misinformation and disinformation across text, image, audio, and video modalities
- Developing and tuning synthetic generator models for text, image, and video data to support detection research
- Contributing to Retrieval-Augmented Generation and LLM development for enhanced detection and analysis

Research Assistant – Gravity Spy

Syracuse University

Oct. 2024 – Present

Syracuse, NY

- Developing interactive maps for LIGO Auxiliary Channels to support Gravity Spy, aiding 30,000+ participants
- Collaborating with stakeholders to ensure accurate integration and improved usability for researchers

SKILLS

- Java, Python, JavaScript, TypeScript, SQL, C, Swift, HTML/CSS, Node.js, ReactJS, Next.js, Git, PostgreSQL
